

ChartEngine for Excel: Offline Activation Guide

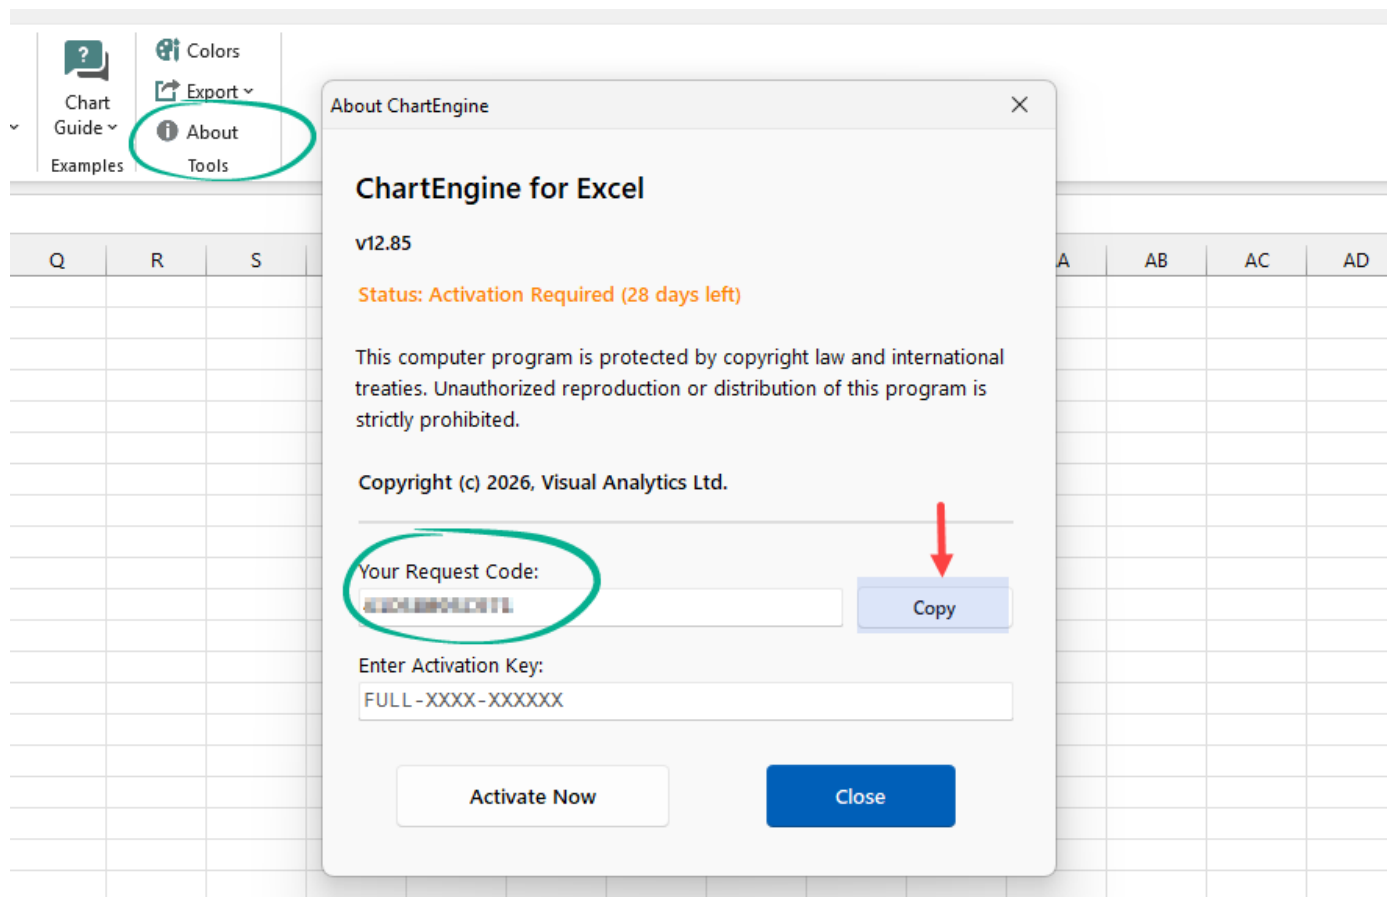

This guide explains how to activate ChartEngine for Excel using the offline activation process. The activation method is designed for secure environments where internet access may be restricted or unavailable.

ChartEngine uses a fully offline activation system. The software itself does not need to connect to the internet at any point during activation. A unique **Request Code** is generated locally, which can then be sent to the ChartEngine licensing team. In return, you will receive an **Activation Key** that can be entered into the software to complete the process.

Temporary Activation Period

The software includes a 28-day activation period so that you can begin using the purchased product immediately while the permanent activation is being completed.

To check the activation status, **please click the About menu** on the ribbon.

Please copy the **Request Code** and email it to licensing@chartengine.io. You will receive an email with your activation code within 24 hours.

Once activation has been completed successfully, the status will display "**Licensed.**" At this point, no further action is required.
