Operational Analytics & Reporting Systems

Turning Disorganized Data Into Clear Operational Intelligence

Excel • Power BI • Power Query • Workflow Automation

Interstate Digital builds operational reporting systems that turn fragmented data into reliable dashboards, automated workflows, and decision-ready intelligence, built to reduce reporting friction and improve operational visibility.

Most Companies Have Data.

Few Have Clarity.

We build systems that make operational data understandable, trustworthy, and actionable.

Revenue-to-COGS Ratio Analysis Example

Standardized reporting frameworks enable leadership teams to compare operational efficiency across regions, brands, products, or any other quantifiable metric while identifying anomalies, and improving forecasting accuracy.

INSIGHT:
Here midwest operations demonstrate the strongest gross margin performance at 61.6%, while Southern regions maintain the lowest COGS burden overall based on cleaned and sorted data.

Automated Data Transformation & Reporting Logic

Using Power Query, Power M, and VBA, Interstate Digital builds repeatable reporting systems that standardize fragmented datasets, automate cleanup workflows, and eliminate manual spreadsheet processes at scale

Executive KPI & Operational Status Reporting

Interactive dashboard systems designed to provide immediate visibility into revenue, margin performance, sales activity, and operational status across reporting periods and business units.

EXECUTIVE KPI FRAMEWORKS

Centralized reporting environments built to surface key business metrics, trend analysis, and operational performance indicators.

OPERATIONAL STATUS MONITORING

Operational reporting systems designed to surface workflow bottlenecks, fulfillment trends, and real-time status visibility across business operations.

Core Consulting Services

- **Data System Design**

Designing information flows and systems that support accounting, creative and production processes for marketing media.

Some of my previous projects have included triple bid submission & review tools, scheduling & bidding systems, and complex, integrated payroll and rights management systems for business affairs divisions. I have also designed systems for scraping PDF budget content into bespoke relational databases for metric analysis and benchmarking purposes as well as building data-visualization models and heuristics for production spend.

- **Production Workflow Analysis & Implementation**

Analyzing, optimizing, and modernizing production and post pipelines for greater speed, visibility, efficiency, and accountability.

I have 25 years of experience establishing production and post workflows, building out post production & facility infrastructure, configuring software systems and pipelines, and structuring staffing guidelines and best practices.

- **Bid Review, Analysis & Negotiation**

Breaking down, comparing, and refining commercial production and post bids to improve clarity, value, and accuracy.

Over the course of my career, I was the primary bidder for literally thousands of jobs across more than a dozen companies and spanning everything from large-scale & guerrilla production in the US & abroad to ENG shoots, editorial, finishing, visual effects, design, animation, print, immersive installations, and apps. I have also reviewed, analyzed and compared hundreds of estimates from 3rd parties for virtually all media creation verticals.

- **Company, Division, Department Building, and Project Management**

Building teams for all aspects of media creation at scale.

I have started companies from scratch and I have grown existing companies to accommodate greater volume and quality. I have opened offices in the US and in the UK and integrated post pipelines between Montreal & New York, and London, New York & Los Angeles. I have both up-scaled and down-sized. I have acquired companies with different tool sets and integrated them into existing structures to expand creative offerings. If there is a production challenge to address, I have probably already done so at least once.

Let's Build Something.

Multiple Diversity Gaps

None of the diversity segments are performing well, but they're failing at different rates. This reveals systemic issues, not pipeline issues.

Multiple Diversity Gaps

None of the diversity segments are performing well, but they're failing at different rates. This reveals systemic issues, not pipeline issues.
